

Response policy for conflict minerals

1. Do not purchase or use conflict minerals✘ from the Democratic Republic of Congo and neighboring countries.
2. To determine if the raw materials used are conflict minerals, we will conduct a supply chain survey using the "EICC / GeSI Conflict Minerals Reporting Template" developed by EICC and GeSI.

✘ Conflict minerals include gold, tantalum, tin, and tungsten (3TG), which are produced by the Democratic Republic of Congo and its neighboring countries and are designated as a source of funds for the activities of armed groups engaged in anti-government activities and human rights violations.
